User Stories

1. As a user, I want to be able to create a new task so that I can keep track of things I need to do.

2. As a user, I want to be able to mark a task as completed so that I can track my progress.

3. As a user, I want to be able to organise tasks by different criteria such as priority, due date, or completion status.

4. As a user, I want to be able to archive or delete completed tasks to keep my to-do list clutter-free.

Wireframes

Wireframing is a visual representation of the layout and structure of a software application or website. It helps designers and developers plan and communicate the user interface and functionality of the product. Here's an example of a wireframe for a to-do app:
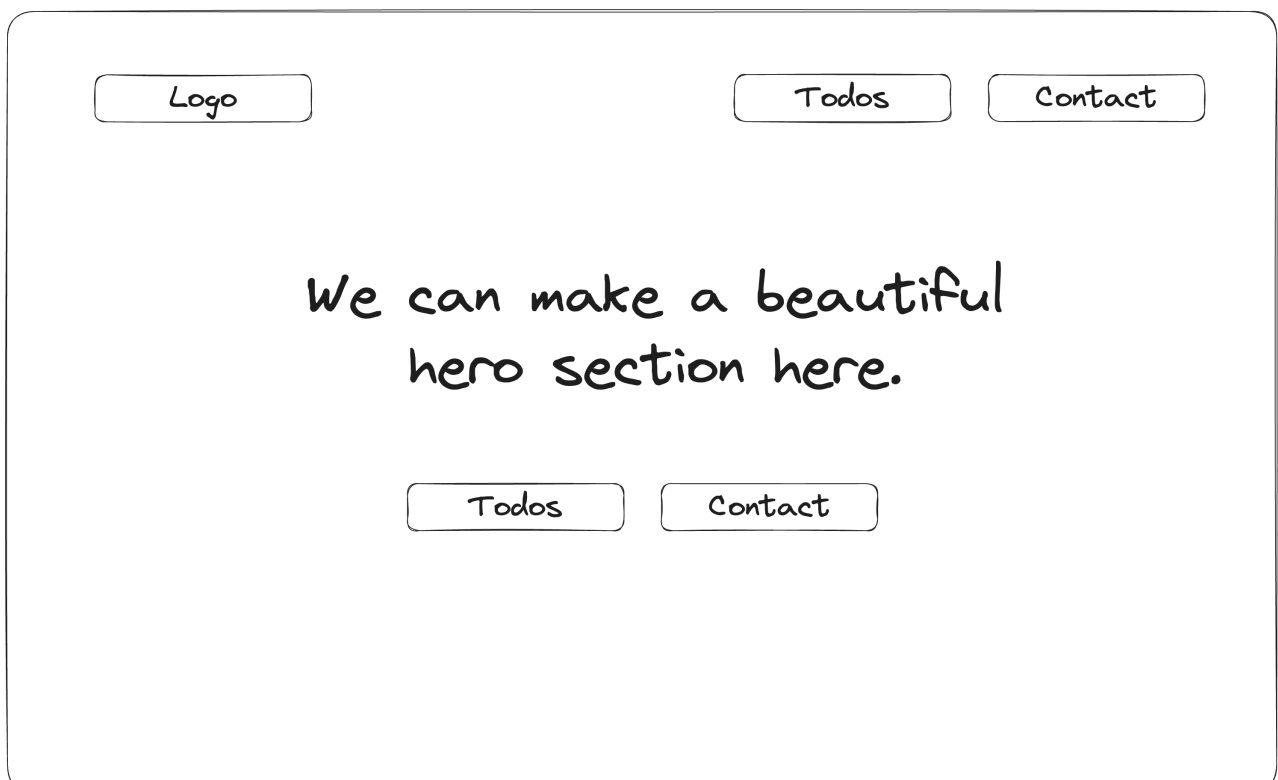

Blue - Active links
Green - Buttons
Yellow - Inputs
Red - Todos
